

CLINICAL SUMMARY BRIEF: KEYNOTE-189 TRIAL

Brand Target: KEYTRUDA (Pembrolizumab)

Medication: Product-A

Trial Registration: KEYNOTE-189 Phase III Trial (NCT02578680)

EFFICACY DATA ENDPOINTS

In the landmark KEYNOTE-189 Phase III clinical trial, KEYTRUDA combination therapy demonstrated an extraordinary survival benefit. The trial met its primary endpoint of Overall Survival (OS).

- **Key Efficacy Claim:** Demonstrated a clinically proven **Overall Response Rate (ORR) of 56% at Week 24** in the combination group, compared to only 18.9% in patients receiving chemotherapy alone.
- **Hazard Ratio (HR):** OS HR was 0.49, representing a highly significant 51% reduction in the risk of death.

SAFETY & TOLERABILITY PROFILE

The safety profile of KEYTRUDA combination therapy was consistent with previously established clinical registries.

- **Key Safety Parameter:** Grade 3/4 Immune-Mediated Adverse Reactions occurred in **10% of patients** in the active cohort.
- **Common Events:** Fatigue, nausea, and pneumonitis were monitored according to standard safety guidelines.
